1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

2. Claims 1-11 are objected to because of the following informalities.

In line 3 of claim 1 "a standby feedback circuit" is redundantly recited.

In lines 10, 14, and 18 of claim 1 "a unique power-on initiation circuit" is recited yet there is nothing to set forth the recited power-on initiation circuit as unique or different from any other power-on initiation circuit that was old and known in the art at the time of the invention.

Claims 1-11 are confusing and improper because they are replete with grammatical and idiomatic English errors too numerous to individually identify.

Appropriate correction is required.

3. Claim 11 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only. See MPEP § 608.01(n). Accordingly, claim 11 dependent upon claims 1, 8, and 9 has not been further treated on the merits.

4. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-11 are vague and indefinite since the inventive green switch power supply is improperly recited in claim 1 as alternatively comprising the circuitry of lines 8-11 or the circuitry of lines 12-15 or the circuitry of lines 16-19 in addition to improperly reciting alternatively it as comprising the circuitry of lines 24-32 or the circuitry of lines

33-45. Furthermore claim 2 improperly recites the inventive green switch power supply as alternatively comprising the circuitry of lines 8-12 or the circuitry of lines 13-19.

Furthermore claim 5 improperly recites the inventive green switch power supply as alternatively comprising the circuitry of lines 5-10 or the circuitry of lines 11-17.

Furthermore claim 6 improperly recites the inventive green switch power supply as alternatively comprising the circuitry of lines 7-15 or the circuitry of lines 16-29.

Appropriate correction is required.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-6 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Hermann et al (US 5,703,764).

Hermann et al discloses a power supply with standby power integrated onto an IC as recited by claims 1-6 and 11 as best that can be determined from the present imperfect claims.

7. Claims 7-9 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Isono (US 6,297,976).

Isono discloses a power supply comprising a main power supply and a standby power supply as recited by claims 7-9 and 11 as best that can be determined from the present imperfect claims.

8. Claim 10 is rejected under 35 U.S.C. 102(b) as being anticipated by Rehm et al (DE 196 52 604 or EP 0 803 966).

Rehm et al discloses a single ended power supply converter circuit as recited by claim 10 as best that can be determined from the present imperfect claims.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

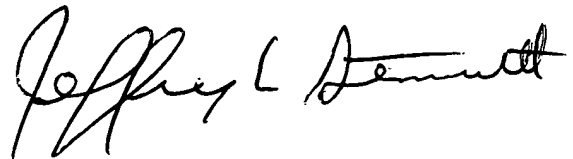

De Sartre et al (US 4,228,493), Notohamiprodjo (US 4,628,433), Bailey et al (US 4,860,188), Fraidin et al (US 5,115,185), Tezuka et al (US 5,267,135), Dinwiddie et al (US 5,353,215), Kim (US 5,905,491), Kajouke et al (US 6,166,934), Baarman (WO 94/22207), and Japanese 2001-119949 are cited to show power supplies old and known in the art at the time of the invention.
